

Crane facts

- The tallest British bird standing at 130 cm.
- Wing span of 220 centimetres.
- Around 30 cranes live in Norfolk.
- Crane chicks complete their first migration with their parents, who teach the young birds their migratory route.
- Cranes can cover an average of 200 miles in a single day during migration by using thermals, or updrafts of warm air, to gain height and glide over great distances.
- Cranes live for between 20 and 30 years.
