Early purple orchid

- There is around 50 flowers on one plant.
- One of the earliest flowering orchids.
- Likes to grow in non-acidic soils in hedgerows, banks, ancient woodland and open grassland.
- All orchid flowers have bilateral symmetry, which means if it is divided in two down its centre, both halves are identical. This is similar to the symmetry found in a human face.
- There are more than 25,000 species of known orchids. That's over twice the number of bird species.
- Orchids have the smallest seeds in the world.
