
Wildlife in Common Survey Form

Site Name: Shotesham Common
Grid reference: TM245991
District: South Norfolk

Parish: Shotesham
Area: 21.6ha
Survey date: 2018 & 2019

Designations: Site of Special Scientific Interest

Registered Common Number: CL 20

Habitat Description:

Shotesham Common is registered common (CL20) and a Site of Special Scientific Interest. A large linear common, almost a mile in length, it consists of species-rich grazing meadow, which follows the line of the spring-fed Beck.

The marshy grassland is richest in the south, being influenced by the Beck and springs, it supports meadowsweet (*Filipendula ulmaria*), angelica (*Angelica sylvestris*), fen bedstraw (*Galium uliginosum*), greater birdfoot trefoil (*Lotus pedunculatus*), meadow vetchling, soft rush (*Juncus effusus*), hard rush (*Juncus inflexus*), blunt-flowered rush (*Juncus subnodulosus*), fleabane (*Pulicaria dysenterica*), fool's watercress (*Apium nodiflorum*) and lesser water parsnip (*Berula erecta*), water mint (*Mentha aquatica*) and water figwort (*Scrophularia auriculata*). Common spotted orchid (*Dactylorhiza fuchsii*) and heath spotted orchid (*Dactylorhiza maculata*) were also found on the site.

The grassland become slightly less diverse towards the northern end of the common, where sedges and tall grasses are more frequent. The sloping boundaries of the common are generally less diverse being drier.

The boundaries are a gappy hawthorn (*Crataegus monogyna*) hedge, patches of low bramble (*Rubus fruticosus* agg.) scrub, and some mature trees to the north, including oak (*Quercus robur*), poplar (*Populus* sp.) and coppiced hazel (*Corylus avellana*). There are a few scattered trees on the common, with alder (*Alnus glutinosa*), beech (*Fagus sylvatica*) and hawthorn.

The 1909 Norfolk and Norwich Naturalists Society report on The Commons of Norfolk simply records the common as being 'Pasture with *Juncus*'. The first Ordnance Survey maps from the late 19th century show the common as rough pasture, with many ditches, two fords, and a number of wells. By 1906, three springs are shown in the south of the common.

The pond is shown as early as 1840 on the Tithe Map, and on one OS map is depicted as marsh. The Beck is clearly represented, then being the parish boundary between Shotesham All Saints and Shotesham St Mary. Trees are scattered along the boundaries of the common.

Shotesham Common is a valley site in the catchment of the River Tas. An extensive area of unimproved grassland, with a good variety of grassland types. These range from permanently wet marshy grassland on the valley bottom, through wet neutral grassland, to drier grassland on the slopes. A stream runs through the site and there is a small area of basic flush on the valley side.

The Natural England SSSI 1987 citation reports the scientific interest of the site as being "maintained by light grazing and a diverse well developed flora is present with several uncommon species". It goes on "The areas of marshy grassland are dominated by blunt-flowered rush (*Juncus subnodulosus*), sharp-flowered rush (*J. acutiflorus*) and meadowsweet

WILDLIFE IN COMMON

(*Filipendula ulmaria*) with frequent bogbean (*Menyanthes trifoliata*), marsh marigold (*Caltha palustris*), ragged robin (*Lychnis flos-cuculi*) and southern marsh orchid (*Dactylorhiza praetermissa*). More uncommon species present include marsh lousewort (*Pedicularis palustris*), marsh helleborine (*Epipactis palustris*) and common cotton-grass (*Eriophorum angustifolium*).

“Wet neutral grassland is present on less waterlogged soils. Grasses are dominant in the sward and the more frequent species are tufted hair-grass (*Deschampsia cespitosa*), Yorkshire fog (*Holcus lanatus*) and creeping bent (*Agrostis stolonifera*). Herb species are well represented and include cowslip (*Primula veris*), common spotted orchid (*Dactylorhiza fuchsia*), common twayblade (*Listera ovata*) and adder’s tongue (*Ophioglossum vulgatum*).

“Small areas of dry, neutral grassland on hummocky ground are dominated by sweet vernal grass (*Anthoxanthum odoratum*) and Yorkshire fog with meadow saxifrage (*Saxifraga granulata*), Lady’s bedstraw (*Galium verum*) and common quaking grass (*Briza media*). The small flush has a bryophyte-dominated carpet with a short-sward vegetation that includes marsh arrow-grass (*Triglochin palustris*), quaking grass and cuckoo flower (*Cardamine pratensis*). The site also includes small areas of semi-improved and improved grassland”. (Information from <https://designatedsites.naturalengland.org>)

Beck

Marshy Grassland

Target Note Reference Map :

Target Notes:

1. Wet, marshy grassland. Adjacent to the Beck, the area supports meadowsweet, water figwort, fool's watercress, great willowherb, watermint, fleabane, creeping thistle, dock, false oat grass and nettle. This area contains the springs which feed the Beck.
2. Area of species-rich marshy grassland supporting angelica, common spotted orchid, southern marsh orchid, heath spotted orchid, greater birdsfoot trefoil, fen bedstraw, ragged robin, meadow vetchling, cuckooflower, meadow buttercup, fleabane, soft rush, hard rush and blunt-flowered rush. This area has smartly mown paths to allow access. It is cut and baled for hay in late summer.

Drier areas of grassland in the south support neutral grassland plants such as Lady's bedstraw, sweet vernal grass, germander speedwell, meadow saxifrage and Yorkshire fog.

The attractive village pond is shown on the 1840 Tithe map of Shotesham, and is now kept as a village amenity.

3. The Beck is a small tributary of the River Tas. It flows north, along the whole length of the common, with a ford part way along giving access to houses in the west. Old maps show several springs in the southern area of the common. The Beck supports a good diversity of aquatic and marginal plants, including fool's watercress, branched bur-reed, gypsywort, water forget-me-not, watermint, water starwort sp. and, in the north, reed sweet grass. Also celery-leaved buttercup, kingcup, lesser water parsnip and brooklime.
4. Coarser, neutral grassland. An area of somewhat rougher growth, with tall grasses and sedges dominating, also hard rush, soft rush, dock, meadow foxtail, nettle and horsetail. The eastern boundary bank has some old coppiced hazels, and an impressive old oak pollard.

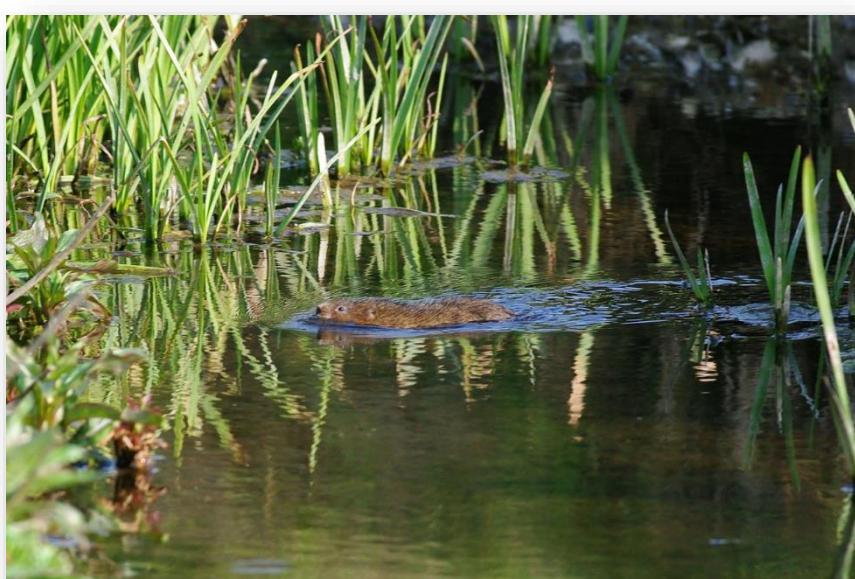

Other notable species:

Barn owl (*Tyto alba*)

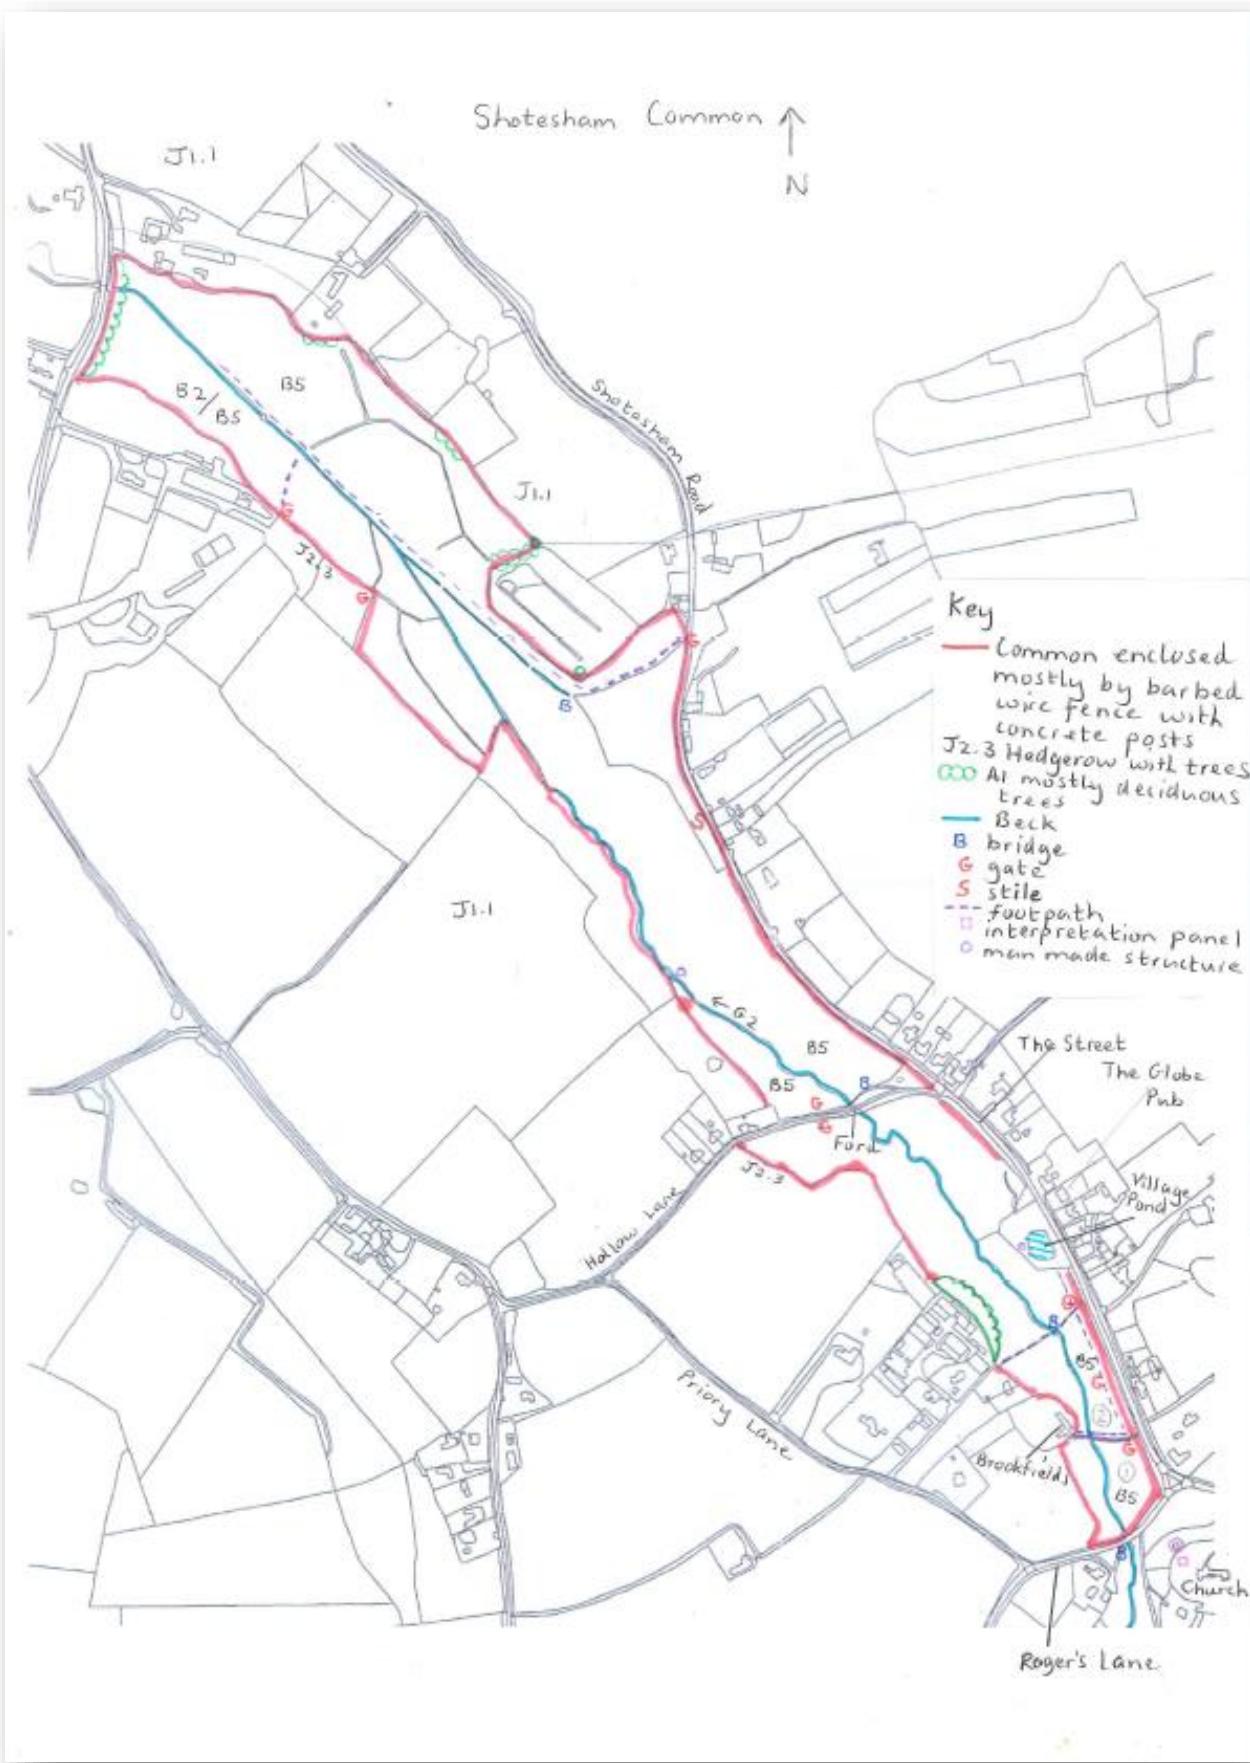

Common frog (*Rana temporaria*)

Water vole (*Arvicola amphibius*) – see image below taken by Mike Fenn

Grass snake (*Natrix natrix*)

Annotated site map

Adjacent habitats/potential buffer zones & linkage to other sites:

The site is surrounded by agricultural land, with village housing mostly to the east and south.

**Is the site in positive conservation management? Yes/no/partly/non-intervention.
(Please give details if necessary).**

Shotesham Common has a dedicated and active conservation group who work hard at managing the Common through grazing and mowing.
